

Electric Panel Upgrade Policy

The facilities fees for electric panel upgrades (residential or commercial) will be calculated by taking the difference between the new and existing panel size in amps and multiplying it by the current dollar per amp rate for facilities fees. The residential panel upgrades will be calculated at the full panel rating. Below is an example of the possible residential electric panel upgrades available for calculating the electric facilities fee.

Assume a fee of \$6.49/amp for the existing facilities fee. Below are the possible residential single-phase 120/240-volt electric panel upgrades available.

New Panel Size Amps	Existing Panel Size Amps	Electric Facilities Fee
200	100	\$649.00
200	60	\$649.00
100	60	\$-0-
400	200	\$1,298.00
